SUMMARY

Senior Software Engineer with 6.5+ years of experience building and scaling enterprise SaaS products. Strong expertise in Java, SQL, Elasticsearch, and REST APIs, with proven ownership of backend services, performance optimization, and production-critical systems in large-scale environments.

TECHNICAL SKILLS

- **Languages:** Java, Python, JavaScript, PL/SQL
- **Databases:** SQL, Elasticsearch, MySQL, Redis, MongoDB
- **Frameworks:** Spring Boot, [Node.js](#), Spring JPA
- **Cloud/DevOps:** ELK Stack, AWS (EC2, Lambda, S3, IAM, Kinesis, Step Functions), Docker, Jenkins
- **System Design:** REST API Development, Microservices Architecture, GraphQL
- **Tools:** Git, Sourcetree, Jira, Postman
- **Additional:** Maven, Liquibase, API Integrations, Python

WORK EXPERIENCE

Oracle India, Pvt. Ltd. Senior Software Engineer	July 2021 - Present
QMetry India Pvt. Ltd. (formerly Infostretch) Software Engineer	June 2019 - July 2021
Playpower Labs Pvt. Ltd. Backend Software Intern	Jan 2019 - May 2019

PROJECTS

OLC(Oracle Learning Cloud) Module - HCM Fusion Apps

Technologies: Java, SQL, Elasticsearch, JavaScript, REST APIs, PL/SQL, ADF Framework, Docker

- Contributed to backend development and performance optimization for Oracle Learning Cloud (Fusion HCM), supporting enterprise-scale workloads.
- Diagnosed and resolved a critical data duplication issue caused by concurrent ADF/VBCS-triggered and API-driven **Elasticsearch** ingestion by redesigning synchronization boundaries across SQL, service, and search layers.
- Designed and maintained **RESTful** backend services in Java, ensuring high-performance CRUD operations across SQL and Elasticsearch data stores.
- Optimized complex **SQL** queries and indexing strategies, reducing execution time by ~30% through execution plan analysis and query refactoring.
- Used **PL/SQL** for controlled data correction and recovery, ensuring transactional integrity during production fixes.
- Containerized and deployed Fusion HCM modules in internal environments using **Docker**, **Jenkins**, enabling controlled testing and maintenance workflows.
- Integrated AI-assisted development tools (Cursor, Claude, Oracle Code Assist) into engineering workflows for feature implementation, refactoring, and debugging; validated outputs via code review, testing, and performance verification to ensure correctness.
- Participated in on-call rotations, leading impact analysis and resolution of production incidents with minimal downtime.

Qmetry Test Management and Automated Testing tools platform

Technologies: Java(Spring Boot), MySQL, AWS (EC2, s3, IAM), Sourcetree with Git for Code repository, Tomcat server, Docker, Jenkins, Redis, Jira, Maven, LiquiBase, JPA,

- Developed and delivered **new features** and **service endpoints** for a Java Spring-based enterprise application with **MySQL** and **AWS** backend.
- Implemented product-wide National Language Support (**NLS**) and integrated **Redis** map-based data handling to enable global usability and high-performance data retrieval.
- Implemented **Jira** Cloud and Server integrations for project, test case import, and cross-product data synchronization.
- Integrated AWS S3 storage for the attachments module, ensuring secure and scalable file handling.
- Designed and optimized **MySQL** queries, reducing query execution time and improving overall API performance by **30-40%**.
- Deployed features to QA test environments using Jenkins pipelines to support continuous integration and testing.
- Deployed and managed multiple Docker containers across different machines to test application license validation under varied configurations.
- Enhanced the exploratory testing module by implementing session recording via browser extensions to capture events, bugs, and user flows.
- Improved audit log functionality to strengthen system compliance and traceability.
- Progressed from bug fixing and performance tuning to owning features and driving system-level optimizations.

Product: Lyearn (Corporate Learning Management System),

Technologies: NodeJS, ELK Stack, MongoDB with RoboMongo tool, AWS services (Lambda functions, Kinesis, Cloud9 IDE, Code commit repository, Cloudwatch for logs. Step functions), Python, GraphQL

- Developed **AWS Lambda functions** for new features in the product, using **NodeJS**, **Elasticsearch**, and **MongoDB**.
- Built **cloud-based microservices and workflows** using **AWS Step Functions**, integrating multiple Lambda functions to deliver modular functionality.
- Deployed robust backend modules using **AWS CodeCommit**, ensuring scalable and maintainable code delivery.
- Created and deployed user groups functionality using NodeJS, Elasticsearch, MongoDB and AWS lambda functions

EDUCATION

Bachelor's Degree, Computer Engineering
Institute of Technology, Nirma University

2019

RECOGNITIONS:

- Qmetry: Received **Rising Star Award** for outstanding performance in first 3 months of joining.
