

Dhruvin Maniar

PROFESSIONAL SUMMARY

I am a **Senior DevOps Engineer** with over 6.5 years of experience delivering scalable, resilient, and cost-efficient platforms across multi-cloud environments. I specialize in CI/CD, Kubernetes, Infrastructure as Code, and automation, with a strong focus on reliability, security, and developer enablement. I excel at debugging complex production issues and enjoy solving challenging problems while continuously improving systems and processes.

TECHNICAL SKILLS

- **Cloud Platform:** AWS, Azure, GCP.
- **Container Orchestration:** Kubernetes, EKS, AKS, GKE, Helm chart, Istio Service Mesh, Docker, ArgoCD.
- **Infrastructure as a Code:** Terraform, CloudFormation.
- **CI/CD:** Github Actions, Azure DevOps, Gitlab CI, Bitbucket.
- **Monitoring:** Datadog, Sumologic, Cloudwatch, Prometheus and Grafana, Splunk.
- **Source-code Management Tools:** GitHub, GitLab, Azure Repo.
- **Scripting Language:** Python and Bash.
- **OS:** Linux, MacOS, Windows.
- **Project Management Tools:** Jira, Confluence.

PROFESSIONAL EXPERIENCE

Senior DevOps Engineer - Appfire

2024 – Present

- Designed and automated **AWS infrastructure** for multiple Atlassian connector applications using **Terraform and Terragrunt**, ensuring scalable and reproducible deployments.
- Built and managed **ECS-based deployments** with auto-scaling, improving application availability and performance.
- Implemented **centralized AWS OIDC authentication** across **100+ repositories and 1000+ CI/CD pipelines**, eliminating long-lived access keys and enhancing security.
- Developed and maintained **GitHub Actions pipelines** for infrastructure provisioning, Docker image builds, and application deployments, significantly reducing release cycles.
- Implemented **centralized monitoring and alerting** using **Sumo Logic and Opsgenie**, improving incident response time.
- Actively contributed to an **AI enablement initiative**, training teams on using LLM tools (Cursor, MCP servers) for infrastructure insights, CloudWatch metrics analysis, and cost optimization.

Senior DevOps Engineer - GenAI platform

2025 – Present

- Improved CI/CD pipeline efficiency by **4–6x**, reducing build and deployment time from **2–3 hours to ~30 minutes**.
- Accelerated service onboarding by implementing a **scalable Helm-based deployment framework**, reducing setup time per microservice by **80%+** and enabling faster delivery across **30+ services**.
- Refactored environment and pipeline architecture to eliminate code duplication and repetitive tasks, improving operational efficiency and allowing DevOps teams to focus on innovation.
- Redesigned container workflows to inject environment variables at runtime via **Azure Key Vault and Kubernetes integration**, eliminating secret-laden builds, enabling automatic secret rotation, and reducing rebuild effort.
- Improved platform reliability by fully isolating **development, staging, and production** environments, ensuring consistency and preventing shared resource failures.
- Enhanced observability by integrating **LLM model monitoring, distributed tracing, uptime checks**, and support

for ingesting custom metrics.

- Improved incident response by standardizing communication using **status pages and observability dashboards**, reducing time to detect and resolve production issues.

DevOps Engineer - OpenMetadata

2023 – 2024

- Designed and maintained **CI/CD pipelines** using GitHub Actions, reducing pipeline execution time by **30–40%**.
- Automated **EKS infrastructure provisioning** using **Terraform and Helm**, including cluster setup and application deployments.
- Managed manifests via **ArgoCD**.
- Developed **Bash automation scripts** to streamline OpenMetadata server installations and configuration.
- Replaced Airflow with **Argo Workflows on Kubernetes**, improving workflow performance, scalability, and operational efficiency.
- Implemented **Prometheus and Grafana monitoring**, enabling proactive alerting and system visibility.

Platform Infrastructure Engineer - Quantiphi

2022 – 2023

- Contributed to an **AI/ML** label automation platform designed to ingest existing label design images and, based on visual design requirements and user-provided metadata, return the closest matching label designs.
- Deployed **Python-based AI/ML** services on **Google Cloud Run**, leveraging a fully managed, serverless architecture to achieve auto-scaling, high availability, and cost-efficient resource utilization.
- Containerized Python applications using Docker and integrated them with Cloud Run to enable zero-downtime deployments and streamlined release workflows.
- Designed and implemented **GCP cloud architecture**, provisioning and configuring core services including **IAM roles and policies, Cloud Storage, BigQuery, Datastore, and AI Notebooks**.
- Enabled and managed GCP AI/ML services and APIs, including **Vision API and AutoML**, to support image analysis and model workflows.
- Designed and implemented a **BigQuery data schema** to store extracted key-marker coordinates, automating ingestion using Python-based **data pipelines**.
- Collaborated closely with data science and product teams to ensure scalable, secure, and production-ready AI/ML infrastructure.

Site Reliability Engineer - Crest Data Systems

2019 – 2022

- Automated **Splunk Cloud infrastructure** deployments on **AWS and GCP** using Terraform.
- Designed and managed AWS services including **EC2, S3, ELB, IAM, VPC, and Route53**.
- Built and maintained **Jenkins CI/CD pipelines** for infrastructure and configuration deployments using Puppet.
- Authored and maintained **operational runbooks** in Confluence to standardize troubleshooting and incident response.
- Provided advanced troubleshooting and root cause analysis, preventing recurring outages and improving platform stability.
- Delivered **on-demand technical assistance** to global Splunk customers, covering deployment, monitoring, and optimization use cases.
- Designed **custom dashboards, alerts, and SPL queries** to improve observability and performance.
- Advised customers on **Splunk best practices**, capacity planning, and performance tuning.

CERTIFICATIONS

- Certified Kubernetes Administrator (CKA)
